Smile Enhancement

Do you like the color of your teeth? Are your teeth straight? Are your two middle upper front teeth longer than adjacent teeth? Are your teeth free of discolored areas? If your front teeth have fillings, do they match the color of your teeth? Are your pleased with the appearance of the fillings in your back teeth? Are you pleased with your smile? If you answered no to any of these questions, our team at Belmar Smiles would be happy to discuss smile enhancement options or cosmetic dentistry. Call 303-935-3574 or email us at information@belmarsmiles.com to schedule a consultation.

There are many types of cosmetic procedures depending on the desired outcome.

Whitening brightens discolored teeth. It can be performed on all types of teeth, but certain types of discoloration are more difficult to remove. In addition, some patients’ teeth will lighten more than others. There are two types of whitening procedures: those done completely in the dental office (in-office whitening), or those dispensed by the dentist to be used at home (at home whitening). The advantages of whitening are that it’s economical and does not require tooth removal.

Bonding is a procedure in which tooth colored materials are applied to the enamel. Bonding covers discolorations, repairs chips and cracks, and fills in gaps. Bonding is often completed in one visit and may not require the use of anesthesia.

Veneers are tooth colored restorations that are designed to cover the front side of teeth. They are affixed directly to the tooth, allowing one to change the color, shape, and/or size of one’s teeth.

Even the most subtle change in your smile can make a dramatic difference in the way you look and feel. When you feel and look good, you project confidence. So make the most of your smile. Give Belmar Smiles a call at 303-935-3574 to discuss what we can do to enhance your smile. We can also be found at 325 S. Teller St., Suite 290, Lakewood, CO 80226.
